

# Vault Managed Backup

Backup data quickly, reliably, and efficiently.

Protecting your systems from security vulnerabilities and active threats are critical components of any cybersecurity program. A quick data recovery rate in the event of a security breach or device failure can be the difference between minimal or significant business disruption. Resiliency is the core competency of our Managed Backup program. Whether you need to recover from a ransomware attack, a failed hardware device, or a malicious insider, Managed Backup will come to the rescue.

Centrally managed from our on-shore Security Operations Centers, our team monitors job status and success to ensure your data is protected from loss, not matter the cause.

## REDUCE BACKUP TIME AND STAY SECURE

Managed Backup provides a simple, managed solution to back up important data quickly, reliably and efficiently without adding unnecessary burden to internal IT departments. Automated data backup to our secure cloud storage ensures that your data is safe from loss.

Our Managed Backup solution includes backup for all of your standard office files.

### BENEFITS:

- ✓ Protect valuable data stored on distributed endpoints
- ✓ Ensure rapid recovery
- ✓ Managed centrally to ensure proper coverage and consistent success
- ✓ Flexible coverage for files or full image
- ✓ Centralized reporting for backup history
- ✓ Backups stored in SSAE compliant secure datacenters
- ✓ Restore anytime from anyplace with an internet connection
